

Hello my dearest -

I am just in from the drill - am drilling on No. 6 below discovery, on Anvil, but have yet to see a color. Will be through there to-morrow, and move to No. 3. When I finish there guess I can get the drill for myself, then will prospect the places I told you about, I get wages while I am drilling for Tom, which Ma will send you each month.

The experts are looking over the Kongock gound and I am going to lay low till I get mine if they take it. I hope you are having a good time, but are good.

Joe Passichi and Ford are working for me on the drill.

I do wish I could be with you it is strictly "bum" alone and I am awfully tired of it all ready, I keep feeling more and more like going to you before I go up Otter Creek to drill, this thing of batching is out of the question.

Rowe has a 10 ton boiler to move from Banner Station to Glacier Creek and wants me to do it for him but I said, if you want troubles with a small man, just talk boiler to me.

With best love for all

All ways yours Paul
